

In the Claims

1. (Previously amended) A method of electronically processing browser-viewable visual stimuli, comprising:

detecting an event comprising changes in visual stimuli electronically presented to, observable by, and resultant from a user interacting with a browser interface;

assigning an identification (ID) to the event;

evaluating at least one changed parameter of the visual stimuli caused by the event;

recording the event, including the changed parameters, for later use in reconstruction; and

reconstructing the event based on the recorded event including the changed parameters.

2. (Previously presented) The method of claim 1 further comprising querying at least one of the changed parameters.

3. (Original) The method of Claim 1 wherein the ID is an alphanumeric string.

4. (Previously presented) The method of Claim 1 further comprising determining the location and area of a primary browser window.

5. (Previously amended) The method of Claim 4 further comprising determining a horizontal size and a vertical size of a primary browser window as immediately displayed in the display area, and a two-dimensional location of at least a corner of the primary browser window.

6. (Previously presented) The method of Claim 1 further comprising determining a location of online-content displayed within the primary browser window.

7. (Previously presented) The method of Claim 6 further comprising determining the location of the online-content as an offset with respect to a corner of the primary browser window.
8. (Previously presented) The method of Claim 1 further comprising determining a parameter of a child window.
9. (Previously presented) The method of Claim 8 further comprising determining a size of the child window.
10. (Previously presented) The method of Claim 8 further comprising determining a two-dimensional location of the child window relative to a primary browser window.
11. (Previously presented) The method of Claim 8 further comprising determining a position of online-content displayed within the child window.
12. (Original) The method of Claim 1 further comprising creating an event object.
13. (Original) The method of Claim 1 further comprising creating a screen-image object.
14. (Previously presented) The method of Claim 12 further comprising recording a parameter of the event object.
15. (Previously presented) The method of Claim 13 further comprising recording a parameter of the screen-image object.
16. (Previously presented) The method of Claim 15 further comprising querying the parameter.
17. (Previously presented) The method of Claim 11 further comprising determining an offset of the online-content relative to a corner of the child window.
18. (Previously presented) The method of Claim 1 further comprising the step of recording at least one of the evaluated parameters.

19. Cancelled
20. (Previously Amended) A computer readable medium comprising instructions for:
- detecting an event comprising changes in visual stimuli electronically presented to, observable by, and resultant from a user interacting with a browser interface;
- assigning an identification (ID) to the event;
- evaluating at least one changed parameter of the visual stimuli caused by the event;
- recording the event, including the changed parameters, for later use in reconstruction; and
- reconstructing the event based on the recorded event including the changed parameters.
21. (Previously presented) The computer readable medium of Claim 20 further comprising querying at least one of the changed parameters.
22. (Previously presented) The computer readable medium of Claim 20 wherein the ID is an alphanumeric string.
23. (Previously presented) The computer readable medium of Claim 20 further comprising instructions for determining the location and area of a primary browser window.
24. (Previously amended) The computer readable medium of Claim 23 further comprising instructions for determining a horizontal size and a vertical size of a primary browser window as immediately displayed in the display area, and a two-dimensional location of at least a corner of the primary browser window.
25. (Previously presented) The computer readable medium of Claim 20 further comprising instructions for determining a location of online-content displayed within the primary browser window.

26. (Previously presented) The computer readable medium of Claim 25 further comprising instructions for determining the location of the online-content as an offset with respect to a corner of the primary browser window.

27. (Previously presented) The computer readable medium of Claim 20 further comprising instructions for determining a parameter of a child window.

28. (Previously presented) The computer readable medium of Claim 27 further comprising instructions for determining a size of the child window.

29. (Previously presented) The computer readable medium of Claim 27 further comprising instructions for determining a two-dimensional location of the child window relative to a primary browser window.

30. (Previously presented) The computer readable medium of Claim 27 further comprising instructions for determining a position of online-content displayed within the child window.

31. (Previously presented) The computer readable medium of Claim 20 further comprising instructions for creating an event object.

32. (Previously presented) The computer readable medium of Claim 20 further comprising instructions for creating a screen-image object.

33. (Previously presented) The computer readable medium of Claim 31 further comprising instructions for recording a parameter of the event object.

34. (Previously presented) The computer readable medium of Claim 32 further comprising instructions for recording a parameter of the screen-image object.

35. (Previously presented) The computer readable medium of Claim 34 further comprising instructions for querying the parameter.

36. (Previously presented) The computer readable medium of Claim 30 further comprising instructions for determining an offset of the online-content relative to a corner of the child window.

37. (Previously presented) The computer readable medium of Claim 30 further comprising instructions for recording at least one of the evaluated parameters.
